## **WATER FEATURE IN KATARA – LET THE SHOW BEGIN!**

February 2017 featured the opening of a new water feature with the first ever interactive Fountain Flame in the Middle East.

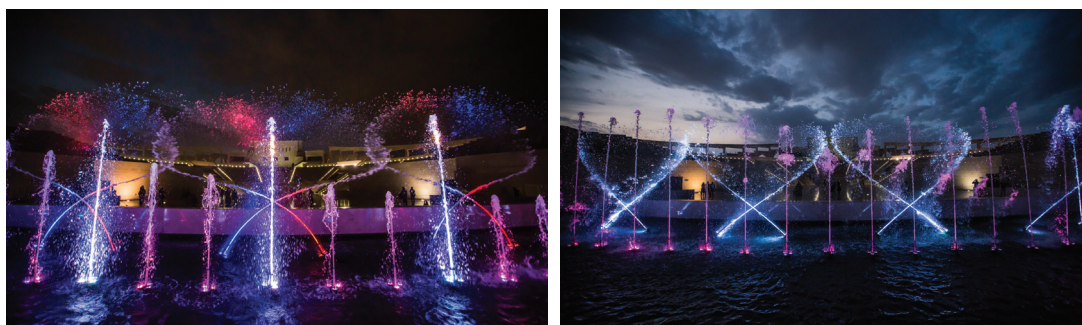

"The design concept came from the idea of a flaming torch which was used in ancient times as a symbol of harmony" – says Omar Khayat, designer, WATERMASTER Qatar. The Interactive Fountain Flame is a breakthrough design in the world of special effects. Controlled via DMX SYSTEM, the effect generator shows the spectacular interplay of fire and water, reaching the height of up to 10 meters. RGB LED-spotlights illuminate the fountain making it visible from the boulevard stretching along Katara Cultural

Village, offering a variety of effects, and surely live entertainment.

This breakthrough technology was developed by OASE, provider of innovative solutions based in Germany, creator of numerous world landmarks such as Banpo Bridge (Korea) or Suntec City (Singapore). Turnkey project execution including design, testing and commissioning was delivered by WATERMASTER Qatar in just 3 months, making it an important milestone in the history of the company – a new landmark was brought to Qatar though. ■

*Animation software helped to design the end effect in line with the client's vision and considerably save time during testing & commissioning phase. Project by OASE & WATERMASTER.*
