

## FiltoSmart and FiltoSmart Thermo external filters – clever and compact for medium-sized aquariums

The entry-level filters of the FiltoSmart series are suitable for small and medium-sized aquariums from tank sizes 60 to 300 litres with medium fish stock. They are available with or without the HeatUp adjustable heater (from FiltoSmart 100) and have a high filter volume, which thanks to multi-stage, biological-mechanical filtration effortlessly ensures crystal-clear water – and they do it in the compact size. The FiltoSmart series of filters are particularly quiet in operation and very energy-efficient. The self-venting function ensures operation without complications, and the shut-off automation prevents undesirable water escaping when cleaning the filter (from FiltoSmart 100).

## **BioMaster and BioMaster Thermo external filters – maximum convenience thanks to extremely simplified cleaning**

The convenience among the external filters for aquariums between 250 and 600 litres with high fish stock, ensures extremely easy cleaning thanks to the EasyClean pre-filter module; bothersome removal of the filter is dispensed with. The pre-filter module is simply taken out, rinsed out and reinserted. The discrete, highly-efficient filter technology, including a fine 45 ppi pre-filter foam has a high filter volume and an optimally matched combination of highly-effective biological filtration through Hel-X, as well as mechanical-biological cleaning through filter foams. The complete set includes filter media, hoses, adapter, intake and outflow tube, as well as water diffuser.
