

Easy Garden Control

The smart revolution: Centrally control all processes on the pond

With OASE EASY GARDEN CONTROL (EGC) the age begins in which all important functions in and on the pond or in the garden can be centrally controlled. The heart of the OASE EGC products is the new Inscenio FM-Master WLAN EGC. The revolutionary garden power outlet is quite easily integrated into the home network via a router. Thus it enables convenient operation and control of the connected devices with an app via smart phone or tablet (iOS or Android). In addition to the four switched power outlets – one of which is dimmable – the OASE InScenio FM-Master WLAN EGC is equipped with an EGC connection. All connected devices are networked via a new EGC connection cable that is designed for underwater use. These devices include the OASE pond pumps AquaMax Eco Expert and AquaMax Eco Titanium, as well as the new fountain pumps of the Aquarius Eco Expert series. Moreover, the OASE drum filters of the ProfiClear Premium series, as well as the illumination components, for example from the ProfiLux Garden LED RGB system, can also be connected. In addition, all classic radio-controlled OASE products like Water Quintet, WaterJet Lightning and extending to the Inscenio FM-Master 3 und FM Profimaster can also be integrated in the system.

The networking ensures a high level of functional security, particularly in the demanding implementation areas of our drum filters, such as on the koi pond, for example. Thus it is possible to monitor the filter system at any time via the home network. If there is a fault or if there are abnormalities, the pond owner receives a message and can act immediately.

OASE products already have an intensive development path behind them. Even at start of sales in 2017, through the controller the system will offer a variety of possibilities through the home network. In the course of the season, a free-of-charge update will follow that networks the EGC products with the OASE Cloud. This measure enables the pond technology to be controlled from anywhere in the world. In the case of the ProfiClear Premium, in addition to

analyses of temperature curves, or flush cycles, it is also possible to get active messages in the event of a malfunction. The investment in the OASE Easy Garten Control system is also an investment in the near future.
