

### **AquaMax Eco Titanium 30000**

Gravity filter pump for large gravitation filter installations – even for koi ponds

Starting in March 2017, OASE will supplement its AquaMax Eco Titanium gravity filter pump assortment with a 30000 litre variant and thus rounds out the product range on the low end in the direction of AquaMax Eco Gravity. With flow-optimised hydraulics, the AquaMax Eco Titanium 30000 achieves a high degree of efficiency, and naturally it is also equipped with the patented Seasonal Flow Control (SFC) as an intelligent and environment-conscious regulation of the water flow rate and pump head, as well as the protection against dry-run and blocking through Environmental Function Control (EFC by OASE).

The solid pump casing of cast stainless steel and rotor shaft and bearings of high-quality SIC ceramics ensure extraordinary reliability and long service life.

For example, the AquaMax Eco Titanium 30000 is outstandingly suited for efficiently pumping cleaned water through a drum filter and then pumping cleaned water back into the pond, even over long distances. The innovative Eco Control with 10 EGC meter cable is included in the scope of delivery.

The clever Eco Control with an illuminated two-line display is equipped with a 10 m EGC cable and is suitable for bi-directional control of the pump. Thus the pump can be conveniently dimmed, power consumption is queried; speed and total runtime of the pump are displayed. (OASE)
