

## **ProfiClear Premium EGC**

Perfect for koi ponds: Optimized technology and new digital possibilities

The high-end module filter system for koi ponds and other large bodies of water developed by and with koi experts represents a new generation of module filters that offer a water quality that satisfies professional requirements, and at the same time can be implemented in the most confined space. The ProfiClear Premium EGC has a unique self-cleaning function; the intelligent switch centre controls removal of coarse debris, with deep filtration to 60 microns – finer than a human hair – entirely autonomously.

Starting in 2017 the pump-fed version as well as the gravity-fed version of the ProfiClear Premium drum filter is available as EGC variant. Connected to the new Easy Garden Control system with the InScenio FM-Master WLAN EGC as its heart, all settings of the drum filter can be conveniently controlled with an app via smart phone or tablet (Android or iOS). An upgrade of existing installations is also possible through a separately available upgrade kit. Moreover, in the course of the 2017 season there will be a free-of-charge update with additional digital features, such as connection to the OASE Cloud for location-independent control of the filter.

In addition to the control possibilities of the controller, as part of the Cloud update, extensive analyses concerning rinse water consumption, temperature curves, or mobile information in the event of malfunctions can be presented. The new safety advantage: For the gravity-fed models an additional sensor also detects failure of pumps that are not EGC-capable. All in all, thanks to the connection, all filter functions of the ProfiClear Premium EGC can be viewed any time and any place.

### OASE ProfiClear Premium EGC

ProfiClear Premium drum filter, pump-fed EGC (item 47003)

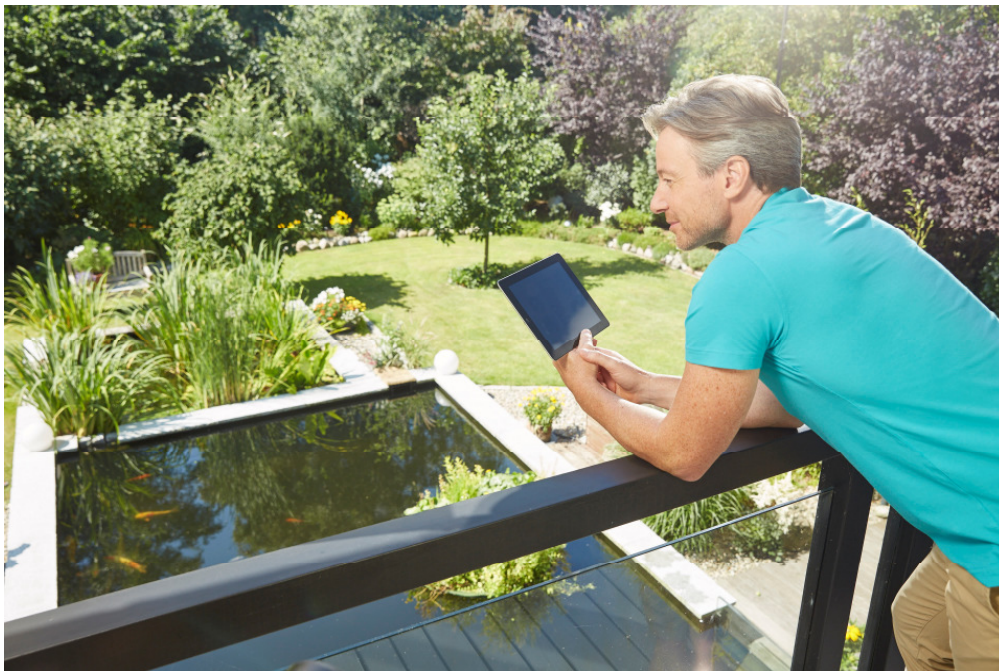

RRP €3499.00

OASE ProfiClear Premium drum filter, gravity-fed EGC (item 47005)

RRP €3699.00
