Fast forward 15 years on, AEDAS Architects Singapore was tasked to renovate the existing buildings, and the fountain renovation was then undertaken by OASE as a design & build project. In a six months challenge to renovate a sprawling floor area of 45m in diameter, retaining parts of the main fountain, yet giving the entire area a total facelift, the Suntec City Fountain is one example of a renovation project that provided an opportunity to create new experiences with new technology. From an ecological standpoint, the goal was to keep as much of the existing structure as possible and to reduce energy consumption by installing efficient pumps and lights.

A large, illuminated fountain at night, featuring a large circular structure in the background and multiple water jets spraying upwards, creating a dramatic display of light and water.
